

FITTINGS

THREADED

We stock a large range of threaded fittings in stock. Our range includes standard brass, stainless steel, black steel, poly, gal mal & gal steel. We endeavour to keep most styles and sizes in stock. Threaded fittings are kept in BSP thread with NPT & metric thread available upon request and order. If you are unsure of what material you should use contact us and we can advise the best solution.

BARBED

We also stock barbed fittings. Barb fittings are available in brass, stainless steel, steel, nylon and poly. Also available is the appropriate hardware to clamp your hose to the barb fitting.

AIRBRAKE

Airbrake couplings and adaptors are used in transport airbrake applications. Heavy duty construction ensures couplings will withstand high pressure. Airbrake fittings all conform to the relevant standards ensuring safety and quality.

PUSHFIT

Coming in a wide variety of models, the push fit is a quick-fitting joint for use in predominantly pneumatic tubing.

Available in stainless, nickel plated brass and most commonly PBT resin body, they are suitable for standard pneumatic, clean rooms, anti static, certain chemicals and various other applications.

AIR COUPLERS & ADAPTORS

There are many types and styles of air couplers and adaptors throughout workplaces. They are used for a variety of jobs including air and liquid transfer. If you have an existing unit we can advise you on the style and the correct application for them.

N C P S INDUSTRIAL

FITTINGS

POLY COMPRESSION

Compression is one of the fastest, easiest and most reliable connector for joining metric polyethylene pipe. Installing these compression fittings takes one-third of the time of conventional compression fittings because there's no pipe preparation and no fiddling with loose components.

CAMLOCKS

Versatile and easy to fit, Cam lock fittings are available in poly Nyglass, aluminium and stainless steel. Use them to secure hoses to tanks, fixed pipes and even other hoses. All the different materials make them suitable for a variety of jobs.

BAUER

The Bauer couplings are used extensively worldwide in agriculture and industry to convey liquids and solids. Connections can be securely coupled and uncoupled quickly and easily - no tools or special skills are required. Pipe work can be connected if the couplings are not aligned as the ball and socket coupling principle allows, in most sizes, for a 15° articulation in all directions, when using the Bauer system.

PUR FITTINGS / COMPRESSION

A simple **PUR**, two-piece compression-style design is reusable and allows for fast, leak-free installations. Both fractional and metric sizes are available in both fittings. Also stocked are compression fittings. Dependant of the situation a spigot may be needed to handle higher pressures.

VALVES

Valves can be an integral part of many systems to stop flow from entering a specific route. We have a range of quality valves including general industrial ball valves, gas approved, butterfly valves, knife gates, needle valves as well as many more.

Please contact us to discuss your requirements for your application.
