RUBBER / V BELTS

NATURAL SHEET RUBBER

Natural rubber sheet is made from a blend of Natural and Synthetic rubber polymers. Natural rubber has excellent physical properties including abrasion resistance. Natural rubber has superior resilience with good low temperature flexibility and compression set.

It has relatively low resistance to heat and petroleum based fluids.

SKIRTING RUBBER

Conveyor Belt Skirting Rubber is a specifically designed rubber sheet used as sealing strip on conveyor system loading, transfer and discharge points. Skirting rubber is used to direct material onto the conveyor belt and reduce spillage. The type of Skirting rubber used should be based on the applications specific requirements.

RUBBER EXTRUSIONS

We are able to supply a full range of standard and custom designed extruded strips and mouldings. Available in a wide range of different colours and rubber compounds.

MATTING

There are many types of matting available. Non-slip, anti fatigue, even electrical matting. Each matt is made from a different material to suit a specific application. With thousands of uses contact us today for a suitable solution.

BELTS

The Goodyear belt range includes constructions specifically designed for those harsher applications seen in Agricultural, Mining, Quarry, Timber and Lawn & Garden Markets. So no matter if you have a light duty fan or an aggressive rock crushing application there is a Goodyear belt for you.
